WELCOME TO PAGEWING

A little room to read.

A native PDF reader, written in Rust.

Designed for Linux and macOS. Made for your keyboard.

Press j and k to scroll. Press J and K to turn pages.

Type gg for the first page, or G for the last.

Type 3G to jump directly to page three.

Press ? whenever you want the keyboard reference.

Read the navigation guide

Language website

NAVIGATION

Find your way.

j / k / h / l	Scroll in four directions.
J / K	Next / previous page.
gg / G	First / last page.
42G	Jump to page 42.
Ctrl+d / Ctrl+u	Move half a screen.
Space	Move down a screen.

Drag the page to pan. Press p to fit the page.

READING

Make yourself at home.

p	Fit the whole page.
w	Fit the page width.
+ / -	Zoom in / out.
r / Shift+r	Rotate in either direction.
d	Switch the interface theme.
i	Invert the page for night reading.

Pagewing remembers your page, scroll, zoom and rotation.

SEARCH AND BOOKMARKS

A thought worth keeping.

/	Search the document.
n / N	Next / previous search result.
b	Add or remove a bookmark.
ma / ’a	Save / restore named position a.
Tab	Show the sidebar.
y	Copy all text on the page.
v, drag, then y	Select and copy part of the text.

Try searching for Rust. Matches are highlighted on the page.

Search is case-insensitive and understands Unicode text.

UNDER THE HOOD

Keep the flow.

Pagewing renders PDFs with hayro, a pure Rust PDF engine.

Rendering and search run on a background worker.

Nearby pages are prepared before you need them.

A bounded cache keeps recently viewed pages ready.

No PDFium or Poppler installation is required.

The interface sleeps when idle to conserve energy.

READY WHEN YOU ARE

Your next good read.

Press o to open your own PDF.

Or drag a document into the window.

This guide is also a rendering and text-search test fixture.

It contains vector shapes, text and multiple pages.

Built with Rust. Read at your own pace.
